LAILAK / EVIDENCE BRIEF

Evidence before the next loan tranche

Working document review prototype / No bank pilot or customer traction claimed

The bank task

Compare a funding request with invoices, completed-work records and site evidence. Show missing or conflicting support with a source for each finding.

69 / 72

Exact fields on 12 generated documents. Three remaining errors require review.

36 / 36

Fields on six new-layout synthetic documents with the parser frozen.

18 / 18

Fields from Baidu Unlimited OCR 2 on three generated language samples.

What a reviewer can try

Upload a PDF or scan. Inspect the extracted fields beside the original source page. Compare requested and supported amounts. Find repeated invoice IDs. Save a follow-up action and export the report.

Two reproducible packet examples

Clean packet: no consistency flags. Altered packet: the same supplier and invoice ID appear twice; support totals differ from the funding request. Findings cite the original file and page. These examples are invented, not actual fraud cases.

The next commercial test

A lender must assess whether the report reduces preparation and review work. A 30% reduction is a proposed pilot target, not an achieved saving. Count corrections, false warnings and missed issues.

The tests include the failures

English / Russian / Uzbek Latin / Native PDFs and clean, rotated or degraded scans

Document	Format	Exact fields	Errors
01_en_native.pdf	native	6/6	-
02_ru_native.pdf	native	6/6	-
03_uz_native.pdf	native	6/6	-
04_en_clean.png	clean	6/6	-
05_ru_clean.png	clean	5/6	project_id
06_uz_clean.png	clean	6/6	-
07_en_rotated.png	rotated	6/6	-
08_ru_rotated.png	rotated	5/6	project_id
09_uz_rotated.png	rotated	6/6	-
10_en_low.png	low	6/6	-
11_ru_low.png	low	5/6	project_id
12_uz_low.png	low	6/6	-

How to interpret the result

The test documents were generated with known answers. Existing templates share label families with the extractor. The first regression failures were used to improve it, and that first run is preserved. The fresh six-document row-table challenge used a frozen parser and no subsequent tuning.

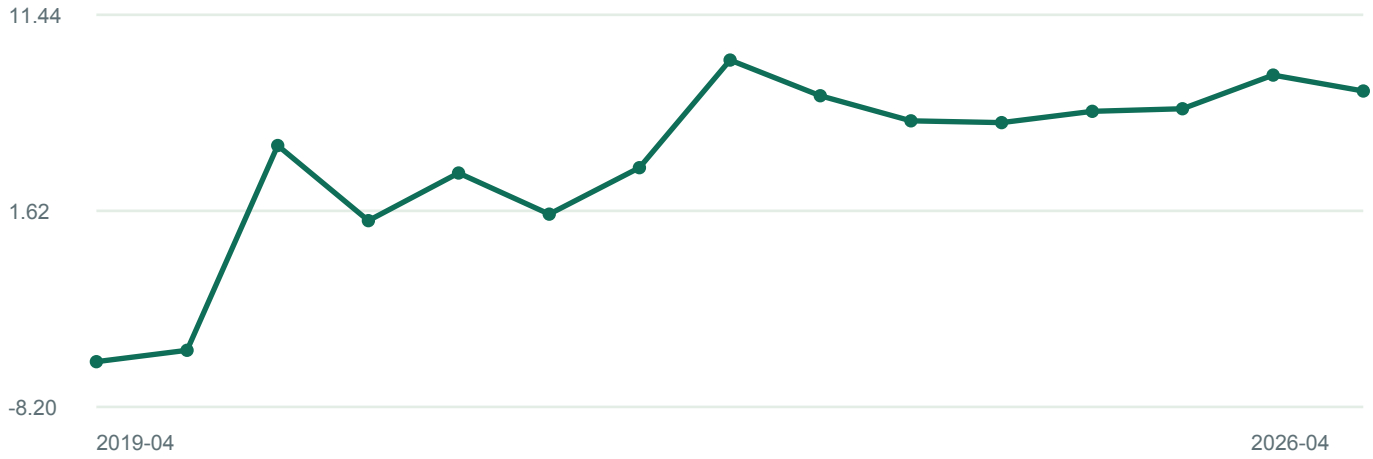

What the result does not establish

These tests do not establish accuracy on real bank records, authenticity, completed work, fraud detection or credit-loss prevention. The default local workflow and the official Baidu trial use different test sets and cannot be ranked from these scores.

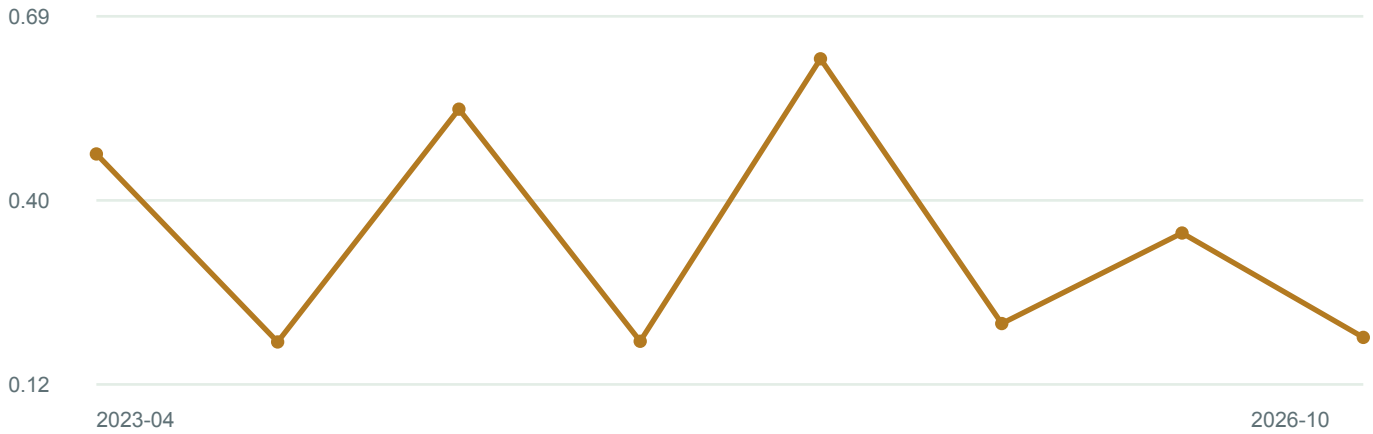

Satellite comparability repaired

Fixed radar geometry / Pixel quality screening / Corrected optical baseline offsets

Tashkent City / one radar track / signal in dB

Field near Sergeli / pixel-masked NDVI / crop identity unknown

Scope and limits

40 radar and 45 optical site-observations across five areas, sampled in April and October. Areas share acquisition dates. This is a processing check, not an independently labelled stage test. Boundaries, crop records and construction milestones still need independent confirmation.

Sources and reproducibility: satellite/frozen_plan.json, per-site manifests, quality observations and monthly CSVs. Official Baidu model: huggingface.co/baidu/Unlimited-OCR-2. Review the full source archive for inputs and results.
